Enter a Rx, otc, or supplement

[Advanced Tools](#)

Your drug list is empty. Add drugs using the form above to check for adverse event reports.

Introduction

This app users to discover reported adverse events and the symptoms for these events for a given drug or combination of drugs.

Instructions

Enter drugs in the form field. Entering multiple drugs will search for reported instances of adverse events. The events can be reported from hospitals, individuals, or pharmaceutical companies.

Disclaimer

This App uses the OpenFDA Dataset which is a beta research project. It is not for clinical or operational use.

App interactions are not designed with a "site chrome" or global navigation/branding. That will be defined at a later date.

Desktop views defined only as first pass. Mobile responsive views will be defined in the next iteration.

Adverse Event Report

Report

For Consumers

Talk to your doctor before using aspirin together with ibuprofen. Frequent or regular use of ibuprofen may reduce the effectiveness of aspirin if you are taking it to prevent heart attacks or strokes. In addition, combining these medications may increase your risk of developing gastrointestinal ulcers and bleeding. You may need a dose adjustment or more frequent monitoring by your doctor to safely use both medications. Contact your doctor immediately if you develop severe abdominal pain, bloating, sudden dizziness or lightheadedness.
