Consumer

Professional

For Consumers

Talk to your doctor before using aspirin together with ibuprofen. Frequent or regular use of ibuprofen may reduce the effectiveness of aspirin if you are taking it to prevent heart attacks or strokes. In addition, combining these medications may increase your risk of developing gastrointestinal ulcers and bleeding. You may need a dose adjustment or more frequent monitoring by your doctor to safely use both medications. Contact your doctor immediately if you develop severe abdominal pain, bloating, sudden dizziness or lightheadedness.

[New List](#)[Save List](#)[Share](#)

Competitive applications will list consumer versions and professional versions of this interaction data. This is a candidate for removal for either time or demographic targeting versions.
